

McBride plc

NON-FOOD INDUSTRY | GREAT BRITAIN 2007

- Combined VP 451 SW 60 D wrap-around case packer/shrink-film wrapper
- Packs plastic bottles filled with liquid soap in wrap-around cases or in trays with film
- Distributes the bottles into lanes with a lane belt divider
- Fast and easy machine changeovers to other formats

REFERENCE

At the beginning of 2007, Meypack commissioned a combined VP 451 SW 60 D wrap-around case packer/shrink-film wrapper to pack plastic bottles at McBride's production facility in Bradford, England. The bottles are packed either in wrap-around cases or in trays with film. The bottles exit the filler in a single lane and are distributed into the respective lanes via a lane belt divider. Depending on the desired format, the bottle formations are transported to the waiting blank and packed. While the finished wrap-around cases simply pass through the film section with shrink tunnel, the trays are wrapped in film and shrunk there.

McBride plc is an internationally active company producing household products in numerous production facilities all around Europe. The company manufactures detergents, household cleaners and body care products under its own brand name as well as for other companies. McBride's customers include 90 % of Europe's 30 largest retail chains.

Single lane product infeed and distribution into the lanes via a lane belt divider
