

# Deutsche Extrakt Kaffee GmbH

FOOD INDUSTRY | GERMANY 2007

- DL 71 depalletiser
- Depalletises empty hexagonal coffee jars
- Automatically removes intermediate layers
- Empty pallet magazine holds 15 pallets

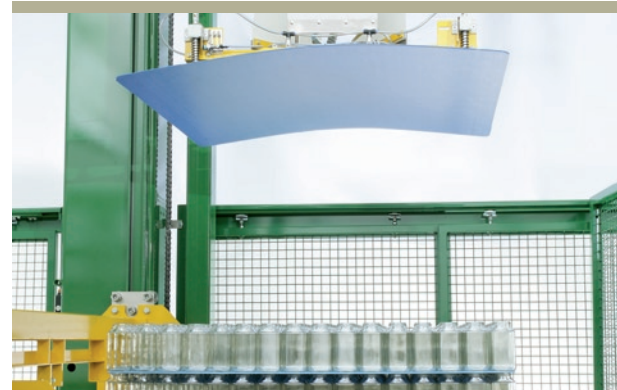

REFERENCE

A Meypack DL 71 depalletiser was installed and commissioned at the Hamburg production facility of Deutsche Extrakt Kaffee (DEK). Full pallets of hexagonal coffee jars are manually fed into the depalletiser, which removes the film and automatically transports the pallet via a pallet transport system to the pushing position. From there, the empty jars are pushed one layer at a time onto an intermediate table where they are buffered in preparation for being transferred to the next machine via a transport conveyor. The intermediate layers are automatically removed and placed in a magazine. After the last intermediate layer has been removed, the empty pallet is transported to an empty pallet magazine.

Deutsche Extrakt Kaffee GmbH (DEK) in Hamburg is one of the leading suppliers of instant coffee and instant coffee beverages to the retail own-brand market. The company was founded in 1955 and belongs to the Cafea Group.
