

# Delica AG

FOOD INDUSTRY | SWITZERLAND 2007

- VP 451 wrap-around case packer
- Packs bags of coffee in wrap-around cases
- Fast and easy machine changeovers to other formats
- High capacity magazine for wrap-around case blanks

REFERENCE

The Meypack VP 451 wrap-around case packer enables bags of coffee to be packed fully automatically into wrap-around cases. Bags of coffee containing 500 g and 1000 g of coffee beans in addition to bags containing 500 g of ground coffee enter the machine in a single lane standing upright. While passing through the machine, the flap of the 1000 g bag is folded over. After that, the products are grouped, positioned in the desired formation onto a blank and then end-packaged. The machine's zero-line design and the automatic index chain adjustment enable fast format changeovers.

For over 50 years, the Swiss company Delica has been sourcing, processing and marketing high quality products from around the world. The main product areas at Delica are coffee and semi-perishable food products such as dried fruit, nuts and seeds, spices and legumes.
